Fast, reliable method of measuring focus performance.

The **SpyderLensCal™** allows photographers to easily measure and calibrate all their interchangeable lenses and recent DSLR bodies.

1.

SpyderLensCal provides a fast, reliable method of measuring the focus performance on your camera and lens combinations. It allows photographers to obtain razor-sharp focusing or check to see that their lenses are working at their peak performance. This device is compact, lightweight and durable, with integrated level and tri-pod mount.

2.

### SpyderLensCal Offers:

**Fast, Easy Solution** for all your interchangeable lenses and recent DSLR bodies provides razor-sharp auto-focusing, using modern DSLR autofocus micro-adjustment technology.

**Compact, lightweight and durable,** with integrated level and tri-pod mount, making this the most convenient way to adjust your own camera gear.

**Save time and hassle** of sending your equipment in for service. Now you can check or calibrate your own lenses.

**Accurate and repeatable Calibration** of your lenses and recent DSLR bodies.

**Worthwhile investment** to ensure your camera is focusing your lenses as precisely as possible.

3.

#### Supported cameras:

Canon (50D, 7D, 5DMkII, 1DMkIV, 1DsMkIII, 1DIV)  
Nikon (D300, D300s, D700, D3, D3s, D3x)  
Sony (A850, A900)  
Olympus (E-30, E-620)
